KU4 Unidirectional Ribbon

Audio Engineering Associates Launches the KU4 Unidirectional Ribbon

October 20, 2010

Pasadena, CA – AEA will unveil the KU4 unidirectional ribbon microphone at the San Francisco AES show. The KU4 is AEA's modern interpretation of the original RCA KU3A, which many engineers consider to be the best ribbon microphone ever made. The increased rear rejection of the supercardioid pattern reduces the amount of room sound, which is often desired in modern production applications, particularly vocal recording. With a custom transformer, strong neodymium magnets and a low-tuned RCA new-old stock ribbon, the KU4 continues AEA's legacy for wide-bandwidth, top-quality ribbon microphones handmade in Pasadena, CA.

See AEA at AES San Francisco 2010 Booth #926
